

## Intersection Stack

## Intersection Stack

- > **Intersection Stack**—A sliding, center-pivoting top-hung divider system that allows individual panels to pivot and stack against each other all along the track system.
- > **Intersection Stack** utilizes the Intersection Divider System frame and hardware and like all Intersection products, is site-specific and flexible to accommodate your needs.
- > **Intersection Stack** panels can be individual or hinged in groups of 2, and can include floor stops to stabilize in various locations along the top track without the need for a floor track.
- > **Intersection Stack** panels can be designed to function as presentation boards, acoustic room dividers, or architectural design elements in almost any environment.

### **Standard Frame Finishes:**
